

Energy Eyes, Inc.

Energy Eyes, Inc. conducts Infrared Energy Audits utilizing Infrared Thermal Imaging. Infrared Thermal Imaging allows you to see it both ways using visual camera technology combined with infrared thermal technology superimposed. Imagine a picture resolution of 320 x 240 pixels giving you 76,800 thermal points of reference in a single picture. Energy Eyes saves your energy dollars from going out the cracks and crevasses of your walls and wallets reducing energy losses. It produces a visual image with 76,800 temperature sensing infrared pixels allowing visual representations of varying temperatures allowing hot or cold images to JUMP out at you like a 3 dimensional picture.

All building envelopes can benefit from Energy Audits for residential, commercial, industrial and institutional applications to identify specific problems and saves money in two ways. Reduce your energy bills and do not pay for excessive repairs where they are not needed. All buildings have thermal variations that identify specific problem spots and areas that need attention, but we can not see them. Temperatures of Heat or Cold are not otherwise visually seen. Infrared Thermography allows visual representations of temperatures of Heat or Cold superimposed over a visual picture that appears absolutely normal to the naked eye pin pointing problems in need of solutions accomplishing this with non-invasive, or non-destructive testing.

Heat is thermal energy that we can not see consequently we can not see where it goes and how simple it is to save it. Problems are immediately discovered visually with Infrared Thermal Visions identify anomalies leading to the root cause of problems like missing insulation in the walls, windows that have lost their thermal seal, overheated electrical circuits, moisture and mold invasion, mechanical equipment issues and roof inspections. Solutions to correct the problems from developing into serious damage and larger repair costs are immediately identified.

Energy Eyes, Inc. is a newly founded company intending to promote the use of non-destructive testing to reduce and eliminate excessive energy consumption and to minimize the cost of being more energy efficient. It was founded by Monet McDonald, and her father M. James McDonald.

We are located at:
7492 Holborn Trail
West Bloomfield, MI 48322-3286
Phone: 248.661.4600
FAX: 248.661.4655
