

JAFtech Manufacturing Ltd. - was there in the beginning when energy conservation was in its infancy. Over the years, we have enabled thousands of companies and organizations - from multinationals to small companies from every market segment - to conserve millions of watt-hours of electricity, save millions of dollars while improving the lighting quality and protecting our environment from green house gases and minimizing waste. As we have grown with this industry we have many success stories and have developed a vision for where the technology is heading.

We started as an electrical contractor and evolved into a manufacturer with the design, development and patenting of a retrofit method enabling existing fluorescent fixtures to utilize new energy saving technology. This resulted from the rebate programs announced at that time by the utilities to encourage their customers to reduce their energy usage as well as employ new technology that had become available with respect to lamps and ballasts. As these retrofit kits grew in popularity throughout North America, numerous individuals from varying organizations approached us to find additional solutions to their varying needs to reduce their energy usage, costs and concerns to reduce their impact on the environment. From all of these various requirements and utilizing our extensive knowledge and experience, we developed innovative new high-efficient fixtures that were quickly adopted and installed throughout North America within a variety of applications. As a result of this growth, JAFtech has become known throughout North America as a leader and innovator of energy efficient designs with a reputation for quality and reliability.

Today, we continue to work closely with design engineers, architects and end-users to find solutions to their lighting requirements while employing the latest in technology and minimizing any potential impact on the environment. As a result, we are cognizant of what is occurring in the marketplace, in terms of what can be done today and into the future along with the benefits, including to our environment, to be realized.

JAFtech Manufacturing Ltd. is an ENERGY STAR Partner.
